DETAILED ACTION

Response to Arguments

1. Applicant's arguments filed 27 October 2005 have been fully considered but they are not persuasive.
2. With regard to applicant's traverse of Ryu in view of Bourbin.

In response to applicant's argument that there is no suggestion to combine the references, the examiner recognizes that obviousness can only be established by combining or modifying the teachings of the prior art to produce the claimed invention where there is some teaching, suggestion, or motivation to do so found either in the references themselves or in the knowledge generally available to one of ordinary skill in the art. See *In re Fine*, 837 F.2d 1071, 5 USPQ2d 1596 (Fed. Cir. 1988) and *In re Jones*, 958 F.2d 347, 21 USPQ2d 1941 (Fed. Cir. 1992). In this case, Ryu was shown to inject light to suppress modes of a laser. Bourbin was a mere teaching that coherent light can be used. Since in this case of substituting one light for another is well known in the art, and no special attributes are assigned thereof.

Claim Rejections - 35 USC § 103

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claims 15 and 22 are rejected under 35 U.S.C. 103(a) as being unpatentable over Ryu US 5,793,512 (Ryu) in view of Bourbin et al. US 4563087 (Bourbin).

Re claim 15 and 22,

Art Unit: 2638

Ryu disclosed injecting a laser device (e.g., col./line: 5/25-35) but does not disclose externally injecting a narrow-band incoherent light signal into a light source capable of lasing; suppressing the lasing modes outside of a bandwidth of the injected incoherent light signal by injecting the narrow-band incoherent light signal; and locking an output wavelength of the light source capable of lasing within the bandwidth of the injected incoherent light.

Bourbin disclosed where incoherent light is injected into a fiber. It would have been obvious to one of ordinary skill in the art at the time of invention to use the incoherent light as injection source in the since incoherent light is a much more readily source of light than coherent light.

Allowable Subject Matter

5. Claims 28-56 are allowed.
6. Claim 16-21 and 23-27 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Conclusion

7. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action

Art Unit: 2638

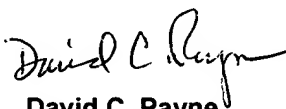

is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
